Wireframing

Components

Utilized classes:

- item
- sub_item
- container

```
.container{
  width: 100%;
}

div.item {
  vertical-align: top;
  display: inline-block;
  align-content: center;
}

div.sub_item {
  vertical-align: top;
  display: inline-block;
  align-content: center;
}

.caption {
  margin-top: 10px;
  display: block;
}

.paragraph{
  margin: 20px 2%;
}
```

```
<div class="container">
  <div class="item">
    <h2>Programming Languages</h2>

    <div class="sub_item">
      
      <p class="caption">Ruby</p>
    </div>

    <div class="sub_item">
      
      <p class="caption">C#</p>
    </div>

    <div class="sub_item">
      
      <p class="caption">HTML</p>
    </div>

    <div class="sub_item">
      
      <p class="caption">CSS</p>
    </div>
  </div>
```

Responsive Layout

- Used percentages and margins mostly
- Did not feel the need to utilize flexbox or grid here in these particular components

Phone

Desktop

Themes

Red & Black

Sandboarder

Themes

Red & Cyan

Turquoise & Red

What's next...

- Finalize a colour scheme.
- Upload more project work.
- Fill in other content, such the about me, blog area
- Get a domain name.
- Create a work email for the site.
